

COMERIO ERCOLE

MECHANICAL CONSTRUCTIONS SINCE 1885 ITALY

Il ritorno alla normalità si avvicina !

Ripartiamo dalla Malesia e Polonia

L'aumento delle vaccinazioni e il miglioramento costante e generale della situazione sanitaria presente nel nostro paese hanno permesso a Comerio Ercole di ritornare sempre più vicini alla tanto attesa normalità. Un primo passo lo si è fatto ad Aprile con la fiera CHINAPLAS, prima fiera a cui Comerio Ercole ha preso parte fisicamente dall'inizio della pandemia e poi anche in Russia alla fiera Tires & Rubber di Mosca. Questo mese invece l'azienda ha potuto inviare dei tecnici specializzati presso clienti in Malesia, Russia e Polonia potendo tornare a svolgere presso gli stabilimenti dei clienti lavori e processi che fino al mese scorso venivano fatti con il servizio TELESERVICE che abbiamo ampiamente sviluppato.

Our technical team at a plant in Malesia

Our technical team at a plant in Poland

The return to normal is approaching!

Let's restart from Malaysia and Poland

The increase of vaccinations and the constant and general improvement of the health situation in our country have allowed Comerio Ercole to return finally ever closer to normality. A first step was taken last month with the CHINAPLAS, the most important trade fair in the Eastern world for plastic and rubber as well in Russia at Tire & Rubbers expo in Moscow, in which Comerio Ercole physically took part since the beginning of the pandemic after more than a year.

This month, instead, the company was able to send specialized technicians to customers in Malaysia, Russia and Poland returning to perform calenderline assembly and commissioning at the customer's plant that until last month were remotely managed.

This step is a goal for Comerio Ercole's team, not only in economic terms but also for the quality of customer service.

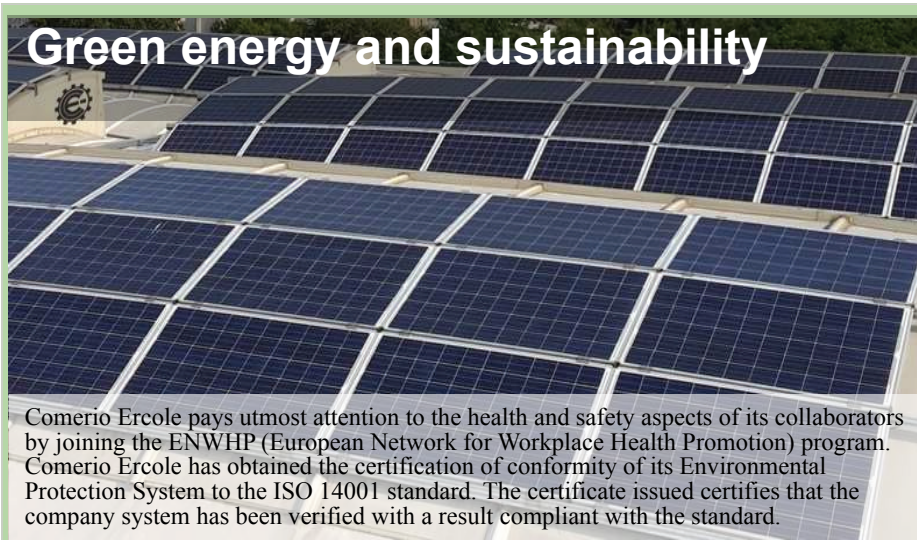

Resuming to make our knowledge, our professionalism and our after-sale service without restriction directly to our customer and not only through our constantly improved TELESERVICE make us hopeful for the future recovering worldwide normal life.

On June 15, 2021 we will be live stream on the "Tire Technology" website Virtual Live "to talk about our Industry 4.0

What was never considered possible is now possible!

Green energy and sustainability

Comerio Ercole pays utmost attention to the health and safety aspects of its collaborators by joining the ENWHP (European Network for Workplace Health Promotion) program. Comerio Ercole has obtained the certification of conformity of its Environmental Protection System to the ISO 14001 standard. The certificate issued certifies that the company system has been verified with a result compliant with the standard.

Innovation in the field of electric batteries

The R&D team of Comerio Ercole, after having stipulated a contract with an important customer in the field of electrical energy storage, is working on improving the effectiveness of electric batteries.

Among the many objectives to be achieved there is the compaction of the batteries themselves to increase the accumulable charge capacity and the replacement of the rare materials present in them with classic materials to lower their costs and bring their production closer to the "giga factory". We are proud to be selected for this important R&D project.
