

COMERIO ERCOLE

QUALITY & TECHNOLOGY SINCE 1885 ITALY

INFO NEWS

IN BREVE:

Nel mese di giugno, dopo il successo ottenuto a INDEX Ginevra, Comerio Ercole ha rafforzato la propria presenza internazionale partecipando a tre importanti fiere: PLAST 2026 a Milano, Expobor & Pneushow 2026 a San Paolo e Saudi Plastics & Petrochem 2026 a Riyadh. Questi eventi hanno permesso di presentare le più recenti innovazioni tecnologiche, consolidare i rapporti con clienti storici e sviluppare nuove opportunità di business.

L'azienda ha inoltre accolto la delegazione del Comune di Svilajnac (Serbia), promuovendo il dialogo su innovazione, eccellenza manifatturiera e collaborazioni internazionali. Grande interesse ha suscitato il nuovo JET – Joint Embossing Technological Center, sviluppato con SIMEC Group, dedicato alle tecnologie avanzate di post-embossing.

Il mercato si conferma dinamico, con investimenti in gomma, pneumatici, plastica, film in PVC e non tessuti. Il primo semestre 2026 si chiude con risultati positivi e prospettive di crescita incoraggianti.

Following our successful participation at INDEX Geneva in May, Comerio Ercole continued its global exhibition activities by attending three important international trade fairs during June. The company exhibited at PLAST 2026 in Milan, one of the world's leading exhibitions for the plastics and rubber industries, where visitors had the opportunity to discover Comerio Ercole's latest technologies and innovative solutions. The international journey continued with participation at Expobor & Pneushow 2026 in São Paulo, Brazil, the most important exhibition dedicated to the rubber and tire industry in Latin America. The event provided valuable opportunities to strengthen relationships with long-standing local customers, meet new prospects and discuss future projects.

At the same time, Comerio Ercole also took part in Saudi Plastics & Petrochem 2026 in Riyadh, Saudi Arabia, a key event for the Middle Eastern plastics and petrochemical industries. The exhibition confirmed the growing interest in advanced processing technologies and reinforced the company's presence in a region that continues to invest significantly in industrial development.

Comerio Ercole was pleased to welcome the official delegation from the Municipality of Svilajnac, Serbia, during their visit to Busto Arsizio, an initiative aimed at strengthening economic, industrial and cultural cooperation between the two territories. The visit provided an opportunity to present Comerio Ercole's expertise in advanced machinery for the rubber and plastics industries, while exchanging ideas on innovation, manufacturing excellence and future international collaboration.

As a company with a strong global presence, Comerio Ercole values initiatives that promote dialogue between institutions and businesses, fostering new opportunities for sustainable growth and long-term partnerships.

We thank the Municipality of Busto Arsizio and all the organizations involved for making this valuable exchange possible.

Innovation, engineered for what's next.

The overall market outlook remains positive. Alongside continued investments from customers operating in the tire and rubber sectors, Comerio Ercole is also witnessing growing opportunities in plastics processing, PVC films, nonwovens manufacturing and several special applications.

Numerous projects are currently under development across different regions of the world, reflecting the confidence that customers continue to place in Comerio Ercole's technology, engineering expertise and long-term commitment.

The first half of 2026 has confirmed strong market activity and increasing demand for advanced manufacturing solutions. Looking ahead, several important projects and exciting developments are already taking shape, creating a promising outlook for the months to come. Comerio Ercole would like to sincerely thank all customers, partners, suppliers and visitors who met with our team during the various exhibitions and events. Their trust and collaboration continue to be a key factor behind the company's growth and success.

Innovation continued to play a central role throughout the month.

The recently announced JET – Joint Embossing Technological Center, developed together with the Italian SIMEC Group, generated strong interest within the technical materials industries.

The new technological hub represents an important step forward in the development and industrialization of advanced post-embossing technologies for polymer films, nonwovens and related materials.
